

BREMER STOCKFEEDS

SUSTAINING GROWTH

New Product

CATTLE LOOSE LICKS

As pastures mature and dry off, now is the time to consider the benefits of providing your cattle with a nutritionally developed loose lick supplement.

Pasture protein levels may no longer meet rumen degradable protein requirements which will inhibit feed intake and reduce pasture digestibility.

Use to promote pasture intake and pasture digestibility. High phosphorus to promote growth and reproduction, salt to avoid over consumption. Trace minerals and vitamins (A,E).

Suitable for mature cows, joined maiden heifers and growing cattle greater than 300kg.

Description	Level	Description	Level
Crude protein % (MIN)	30.0	Salt % (MAX)	15.0
Equivalent crude protein % (MIN)	20.0	Copper mg/kg	90.0
Crude fibre % (MAX)	3.0	Selenium mg/kg	3.5
Urea %	8	Urea can be poison to stock	

Ingredients:

Di-calcium phosphate, protein meal (canola), limestone, salt, urea (MAX 8.0%), vegetable oil (suppress dust), trace mineral vitamin premix

Recommended Daily Consumption: 300 to 500g / day
