

BREMER STOCKFEEDS

SUSTAINING GROWTH

WEANER LOOSE LICK

As pasture matures and dries off, pasture protein levels may no longer meet rumen degradable (RDP) requirements which will inhibit feed intake and reduce pasture digestibility.

To meet this deficit and promote pasture intake and digestibility, the combination of true and equivalent protein improves urea nitrogen utilization. A lower urea inclusion to promote palatability. True protein assists to meet essential amino acid (building blocks of protein) requirements along with added grain to promote palatability, stimulate intake and supply metabolizable energy. High phosphorus to promote growth, trace mineral and vitamins (A, E) to promote availability and meet nutrient requirements during first 250 days of life, the critical body development period.

Suitable for: Young growing cattle up to 300kg.

Description	Level	Description	Level
Crude Protein % (MIN)	22.0	Salt % (MAX)	-
Equivalent Crude Protein % (MIN)	11.0	Copper mg/kg	90.0
Crude Fibre % (MAX)	4.0	Selenium mg/kg	3.5
Urea %	4.0	Urea Can be poison to stock	

Ingredients:

Di-calcium phosphate, protein meal (Canola), dry rolled grain (Barley), limestone, urea (Max. 4%), vegetable oil (suppress dust), trace mineral vitamin premix.

Recommended Daily Consumption: 200 to 300g / day

Available in bulk or 20kg bags.
